These low noise, FET input preamplifiers typically are used with piezoelectric transducers such as accelerometers, hydrophones and seismometers. They also provide excellent performance with high impedance bolometer type transducers and with pyroelectric photodetectors. Their rugged design allows operation in severe environments such as encountered in underwater acoustics applications. 100 Series Preamplifiers are designed particularly as “front ends” for 4000 Series Electronic Filters and 450 Series Instrumentation Amplifiers. They may also be used as gain blocks ahead of lock-in amplifiers and other instrumentation such as oscilloscopes, spectrum analyzers and analog-to-digital converters.

The L package configuration incorporates the same connector type used with 1600 Series Preamplifiers. The cables listed next to Figure 23 can be used to power 125L, 143L and 144L Preamps from DL Instruments filters and instrumentation amplifiers; and the cables will as well carry the preamplified signal back to the filters and instrumentation amplifiers. If no cable is specified then Mating Connector Model 100AE will be supplied for wiring to an external dc supply. This connector must be used with DL Instruments lock-ins and other instrumentation in order to provide an output connection from the preamplifier via user supplied wiring. The 100 Series Preamplifiers do not incorporate internal regulators, and must be operated either from regulated dc power supplies or batteries. The dc power inputs are protected against reverse polarity connection.

**SPECIAL PURPOSE PREAMPLIFIERS**

DL Instruments can provide low noise preamplifiers similar to those described with features such as remotely switchable gain, precisely controlled low frequency rolloff, line drive capability, 1 MHz bandwidth or differential input. Consult factory for specifications. Custom and OEM modifications are available.

**100 SERIES COMMON SPECIFICATIONS**

**INPUT IMPEDANCE** 1000MΩ//15pF

**TYPICAL SOURCE** $R_s < 100 \, \text{MΩ}$  $C_s > 50 \, \text{pF}$

**GAIN STABILITY** ±0.1 dB

**OUTPUT POLARITY** Non-inverted

**MAXIMUM SAFE INPUT (ac + dc)** ±75 V

**TEMPERATURE** operating -25°C to +55°C storage -55°C to +85°C

**PACKAGE** Hermetically sealed

**SHIELDING** Electrostatic

**HYDROSTATIC PRESSURE** Available rated to 1500 psi
